Canada Grants Entrepreneur First-Ever Export Permit to Sell Unique Dinosaur Fossils into the USA

While on business in the province of Saskatchewan, Michael McGrail, of Doylestown PA bought a unique souvenir for his 8 year old daughter Morgan. Her reaction to the prehistoric dinosaur fossil triggered McGrail's entrepreneurial spirit to securing the first ever permit granted for "coprolite" aka dinosaur dung and marketing it for sale under the brand name "Paleo Poop" at the oldest natural science research institution and museum in the Americas – The Academy of Natural Sciences in Philadelphia.

Each piece of Paleo Poop is packaged in an 8 ounce tin can with Jurassic Park like graphics and a Certificate of Authenticity proclaiming that the individual dinosaur dropping is 66 million years old. "Coprolite just like dinosaur teeth or bones came from a living, breathing and sweating dinosaur and the Canadian Government considers it to be the property of the Canadian People" said McGrail.

"When I first showed it to The Academy of Natural Sciences they insisted that we secure permission from the Canadian Government before they would consider selling it" states McGrail. The process took the self-made Dinosaur Manure Entrepreneur over three months before a Permanent Export Permit was granted by the Canada Border Services Agency." The Canadian Cultural Property Export and Import Act, requires that coprolite be subject to control due to the object's age and value.

"My daughter Morgan and I have come a long way developing the product since last year" McGrail recalls from his office in Doylestown. "Now we have a unique product that stimulates people's imagination about dinosaurs and being showcased by one of the leading natural history museums in the world --- it doesn't get much better than that."
